Monongahela Republican.

DAILY AND WEEKLY,

238-240 WEST MAIN ST.

Monongahela City, Penn'a.

Circulates Extensively among Wool Growers, Cattle men, and Coal Producers.

Col. O. E. Berkhold
Supt Ms. Mint
Philadelphia.

Nov 22.- Dear Colonel,

I am interested in a newly discovered article called Carborundum. One of its uses is, to make emory wheels out of, that is, to make better wheels than emory wheels, for the same purpose.

What I want to know is, whether you use emory wheels in the mint, and if so, will you accept two or three of these new wheels of carborundum, and give them a trial. They will do any work which a good emory wheel will do, and do it better; they are less expensive, because they do not

RG104 E-1 Box 178

wear out.

Will you ascertain what sizes & degrees of fineness your Machinist uses, and then let me present you with a few wheels.

Now, steady! It is not proposed to bother you to buy them after trial, nor to bother you with application for any sort of a "Contract." The only object is, to have the United States try these wheels, and if after trial, they prove effective, to have your certificate to that end.

If not, no harm done. Please advise me as above,

I am financially interested in these wheels, and this new abrasive material, and I would be glad to have you serve me if you can, without too much trouble.

Very sincerely yours

Chas. W. Hoppes
